WEB DEVELOPMENT PROJECTS

MyFlix | CareerFoundry Project (Dec 2021 - Mar 2022)

- Created a non-relational database (MongoDB) to store user data and movie information.
- With Node.js and Express, I created a REST API that interacts with the database using Mongoose. I used Postman to test the API endpoints, generated clear and straightforward documentation, then used Heroku to deploy the API.
- Created two single-page, responsive front-end applications, one using React and the other Angular (both following the MVC design pattern) (with Angular Material). Users can register, browse the library, and bookmark their favorites.

Meet App | CareerFoundry Project (Feb 2022 - Apr 2022)

- Using React, I created a progressive web application (cross-platform, offline available) to display events (a list and charts) from a google calendar.
- User stories were translated into scenarios for unit and integration testing (Jest), acceptability testing (Cucumber), and end-to-end testing (Puppeteer).
- To authenticate and authorize users (OAuth) I implemented serverless functions with AWS lambda.
